SUMMARY

Designs and builds agentic AI systems for the enterprise, from multi-agent architecture through the interfaces that put them in front of users. AI architect of a generative analytics platform for Caterpillar's brand strategy team, built on Snowflake Cortex Analyst and Complete, that gives operations users answers in seconds and renders responses as live, interactive React components instead of chat text. Built a multi-agent framework with human-in-the-loop approval gates that became the delivery practice's baseline across two enterprise clients, and delivered chatbot and voice work for member service at Blue Cross Blue Shield of Massachusetts, inside the guardrails a regulated plan requires. Carries this work from proof of concept to billable delivery engagement: architecture, evaluation, and the production system an enterprise can actually run. Measures work by outcomes and owns the delivery process too: intent, spec, plan, build, verify and review stages run through Claude Code, with hooks and evals as gates in code.

CAPABILITIES

AI & Agentic Systems Agent orchestration, tool/function calling, state & memory design, MCP, evals; RAG and semantic layers; generative UI; human-in-the-loop approval patterns; Anthropic & OpenAI APIs, Claude Agent SDK, Snowflake Cortex (Analyst, Complete), Snowflake ML Functions

Interface & Engineering React, Next.js, React Native, TypeScript/JavaScript; Node.js, Python; monorepos (Turborepo, pnpm); component libraries & Storybook; PostgreSQL, MSSQL, Redis

Design & Product Product definition and concept-to-launch ownership; UX research and persona work; design systems and token architecture; interaction and interface design; WCAG 2.2 accessibility; Figma

Architecture & Platform Solution and enterprise architecture; identity (Entra ID, CIAM/B2B, Okta); RBAC; API design (Azure APIM); GCP, Azure, AWS; CI/CD and DevSecOps

Leadership Team leadership to 16 engineers; vendor management; stakeholder alignment; solution delivery ownership

Certifications Claude Certified Architect, Anthropic (in progress, 2026); Google UX Design Certificate; Certified ScrumMaster (CSM)

EXPERIENCE

Perficient

May 2024 - Jul 2026

Senior Solutions Architect, Strategy & Experience Design

Architect and technical lead on enterprise client engagements covering agentic AI delivery, cloud and identity modernization, and scalable platforms across cross-functional teams.

- Built a multi-agent starter framework with configurable RAG and CMS connectors, tool orchestration, structured outputs, human-in-the-loop approval gates, automated evals, policy guardrails and end-to-end observability; it became the practice's delivery baseline and reached production at two enterprise clients.

Caterpillar · Generative Analytics Platform on Snowflake Cortex

Jan 2026 - Jun 2026

- Designed and delivered a custom generative analytics platform (Next.js, Turborepo, Snowflake Cortex Analyst and Complete) for a brand strategy team, giving operations users answers in seconds alongside an analyst request queue measured in weeks, and giving executives the same capability within a larger reporting system. Took it from proof of concept to a billable delivery engagement and into production; agent responses render as live, interactive React components instead of chat text.
- Built the first pass of the Cortex Analyst semantic model over the warehouse's funnel-stage tables, mapping the brand team's business vocabulary for text-to-SQL and scoping the full build-out for a data scientist.
- Built a customer-journey conversational interface demonstrating Snowflake ML Functions (Forecasting, Anomaly Detection and Top Insights), with automations that refreshed daily dashboards and produced a weekly report.
- Led the BI platform evaluation behind the build recommendation, architecting a three-layer approach that preserved existing embedded reporting rather than forcing a rip-and-replace.

Lockton · Workflow Modernization POC

Jul 2025 - Jan 2026

- Built a Node.js and React proof-of-concept automating stop-loss renewal end to end: task creation, associate assignment, client data collection, carrier RFPs, and policy-system updates.
- Modeled the data and API integrations for RFP creation, carrier selection, and plan synchronization, and partnered with architects and BAs to define process flows, user roles, and demo environments.

Varsity Brands · Event Registration Platform — Jan 2025 - Jul 2025

- Led a 16-developer team delivering two applications on a registration and management platform serving hundreds of schools nationwide, and migrated critical business processes from Salesforce to Azure.
- Designed a Next.js monorepo (Turborepo, pnpm, shadcn/ui, TanStack Query/Table) for admin and customer-facing apps, with a reusable Storybook component library and WCAG 2.2 accessibility enforced throughout.
- Architected identity on Microsoft Entra ID (External ID, B2B, CIAM), covering app registrations, MFA enforcement, and role/permission governance for internal and external users, with an RBAC model spanning application and database roles.
- Engineered Azure APIM policies, partnered with DevOps on Azure Pipelines CI/CD and ReadyAPI test automation, and authored the specifications and architecture documentation guiding the team.

Blue Cross Blue Shield of Massachusetts · Member Experience — May 2024 - Jan 2025

- Delivered chatbot and voice application work for member service, building conversational flows against enterprise member data with the guardrails and escalation paths a regulated health plan requires.
- Re-platformed the member chat experience from web to React Native, improving engagement and consistency across web and mobile, and led expansion of demographic forms across both to meet government compliance requirements.
- Designed the solution surfacing members' financial account balances and transactions from multiple vendors, plus an internal tool giving service teams full visibility into member communications.

AmeriLife

Jan 2022 - Feb 2024

Director of Technology, Producer

- Owned solution delivery across multiple interconnected systems, leading a team of 7 plus external vendors; modernized the marketing technology stack and grew website traffic 900%.
- Engineered a scalable CMS platform on Next.js and TypeScript powering multiple web properties, and directed implementation of the surrounding stack (Salesforce CRM, Blueshift CDP, Contentful CMS, and Twilio) for automation and personalization.

Lennar

Mar 2018 - Dec 2021

Lead Developer, Customer Experience

- Helped redefine the Lennar home purchase experience, digitizing and modernizing the existing purchase application.
- Built interactive community maps for the main website in React and Node.js, replacing static PDF maps with real-time home availability, pricing, and lot status aligned to architectural plans.
- Shipped React Native iPad kiosk applications for welcome home centers, a React Native tablet portal giving employees a searchable library of internal dashboards, and an enterprise HR application in PowerApps within Microsoft Teams.

Carnival Cruise Lines

Aug 2016 - Mar 2018

Senior Web/Mobile Developer, Guest Technology

- Technical lead for guest-facing mobile and web experiences across React Native apps, React video walls, and interactive kiosks, adopting React Native in its first year of general release.
- Engineered an automated real-device testing environment, including phone and tablet cabinets installed aboard ships, to validate performance at fleet scale.

EARLIER

Emerging technology adopted early, then delivered at scale: the Innovation Lab at PwC across mobile, IoT, and VR; first employee at Gui.de, co-developing the patent-pending ML algorithms showcased on Android TV at Google I/O; resident architect and technical evangelist at Sapient for General Motors, Disney, Coca-Cola, and Mars.

PwC Experience Center · Senior Associate — Nov 2013 - Jul 2016

Gui.de · Development Lead / Architect — Aug 2012 - Jul 2013

Sapient Razorfish · Senior Technology L2 — May 2008 - Aug 2012
