S U M M A R Y

Builds product interfaces on top of generative AI, turning model output into real interface rather than chat text. Most recently sole architect of a generative analytics platform for a Fortune 100 brand team, rendering agent responses as live, interactive React components and shipping 15 production screens from a single specification file derived from agent-analyzed dashboard screenshots - design system, component library, and delivery playbook included. Also built the multi-agent framework with human-in-the-loop approval gates that became a delivery baseline at two enterprise clients, and shipped agentic chatbot and voice work for a regulated health plan's member service, including a re-platform of the chat experience from web to React Native. Fifteen years shipping consumer and enterprise product across web and mobile now extend into agentic surfaces, carrying each from proof of concept into production.

C A P A B I L I T I E S

AI & Agentic Systems Agent orchestration, tool/function calling, state & memory design, MCP, evals; RAG and semantic layers; generative UI; human-in-the-loop approval patterns; Anthropic & OpenAI APIs, Claude Agent SDK, Snowflake Cortex Agents

Interface & Engineering React, Next.js, React Native, TypeScript/JavaScript; Node.js, Python; monorepos (Turborepo, pnpm); component libraries & Storybook; PostgreSQL, MSSQL, Redis

Design & Product Product definition and concept-to-launch ownership; UX research and persona work; design systems and token architecture; interaction and interface design; WCAG 2.2 accessibility; Figma

Architecture & Platform Solution and enterprise architecture; identity (Entra ID, CIAM/B2B, Okta); RBAC; API design (Azure APIM); Azure, AWS; CI/CD and DevSecOps

Leadership Team leadership to 16 engineers; vendor management; stakeholder alignment; solution delivery ownership

Certifications Google UX Design Certificate; Certified ScrumMaster (CSM); Claude Certified Architect, Anthropic (in progress, 2026)

E X P E R I E N C E

Perficient

May 2024 - Jul 2026

Senior Solutions Architect, Strategy & Experience Design

Architect and technical lead on enterprise client engagements covering agentic AI delivery, cloud and identity modernization, and scalable frontend platforms across cross-functional teams.

Built a multi-agent starter framework with human-in-the-loop approval gates that became the practice's delivery baseline, reaching production at two enterprise clients.

Fortune 100 Manufacturer · Agentic Generative Analytics Platform

Jan 2026 - Jun 2026

Designed and delivered a custom generative analytics platform (Next.js, Turborepo, Snowflake Cortex Agents) for a brand strategy team, replacing an analyst request queue measured in weeks with answers in seconds and converting the initial proof of concept into a billable delivery engagement. Agent responses render as live, interactive React components instead of chat text.

Produced 15 production screens from a single specification file derived from 33 agent-analyzed dashboard screenshots, delivering the application, design system, component library, pitch materials, and sprint playbook as the sole architect.

Built the delivery method itself: agent-executable user personas that compose and critique every screen before human review, and a structured knowledge base that coding agents work from directly, keeping strategy and implementation in sync.

Led the BI platform evaluation behind the build recommendation, architecting a three-layer approach that preserved existing embedded reporting rather than forcing a rip-and-replace.

Insurance Brokerage · Workflow Modernization POC

Jul 2025 - Jan 2026

Built a Node.js and React proof-of-concept automating stop-loss renewal end to end: task creation, associate assignment, client data collection, carrier RFPs, and policy-system updates.

Modeled the data and API integrations for RFP creation, carrier selection, and plan synchronization, and partnered with architects and BAs to define process flows, user roles, and demo environments.

National Events & Brands · Event Registration Platform

Jan 2025 - Jul 2025

Led a 16-developer team delivering two applications on a registration and management platform serving hundreds of schools nationwide, and migrated critical business processes from Salesforce to Azure.

Designed a Next.js monorepo (Turborepo, pnpm, shadcn/ui, TanStack Query/Table) for admin and customer-facing apps, with a reusable Storybook component library and WCAG 2.2 accessibility enforced throughout.

Architected identity on Microsoft Entra ID (External ID, B2B, CIAM), covering app registrations, MFA enforcement, and role/permission governance for internal and external users, with an RBAC model spanning application and database roles.

Engineered Azure APIM policies, partnered with DevOps on Azure Pipelines CI/CD and ReadyAPI test automation, and authored the specifications and architecture documentation guiding the team.

Regional Health Insurer · Member Experience

May 2024 - Jan 2025

Delivered agentic chatbot and voice application work for member service, building conversational flows against enterprise member data with the guardrails and escalation paths a regulated health plan requires.

Re-platformed the member chat experience from web to React Native, improving engagement and consistency across web and mobile, and led expansion of demographic forms across both to meet government compliance requirements.

Designed the solution surfacing members' financial account balances and transactions from multiple vendors, plus an internal tool giving service teams full visibility into member communications.

AmeriLife

Jan 2022 - May 2024

Director of Technology

Owned solution delivery across multiple interconnected systems, leading a team of 7 plus external vendors; modernized the marketing technology stack and grew website traffic 900%.

Engineered a scalable CMS platform on Next.js and TypeScript powering multiple web properties, and directed implementation of the surrounding stack (Salesforce CRM, Blueshift CDP, Contentful CMS, and Twilio) for automation and personalization.

Lennar

Mar 2018 - Dec 2021

Lead Developer, Customer Experience

Built interactive community maps for the main website in React and Node.js, replacing static PDF maps with real-time home availability, pricing, and lot status aligned to architectural plans.

Shipped React Native iPad kiosk applications for welcome home centers, a React Native tablet portal giving employees a searchable library of internal dashboards, and an enterprise HR application in PowerApps within Microsoft Teams.

Carnival Cruise Lines

Aug 2016 - Mar 2018

Senior Web/Mobile Developer, Guest Technology

Technical lead for guest-facing mobile and web experiences across React Native apps, React video walls, and interactive kiosks, adopting React Native in its first year of general release.

Engineered an automated real-device testing environment, including phone and tablet cabinets installed aboard ships, to validate performance at fleet scale.

Published react-native-linkedin-login, an open-source native authentication bridge for React Native (70+ stars, 40+ forks), still used in production by third-party applications.

E A R L I E R

Emerging technology adopted early, then delivered at scale: the Innovation Lab at PwC across mobile, IoT, and VR; first employee at Gui.de, co-developing the patent-pending ML algorithms showcased on Android TV at Google I/O; resident architect and technical evangelist at Sapient for General Motors, Disney, Coca-Cola, and Mars.

PwC Experience Center · Senior Associate

Nov 2013 - Jul 2016

Gui.de · Development Lead / Architect

Aug 2012 - Jul 2013

Sapient Razorfish · Senior Technology L2

May 2008 - Aug 2012
